## 7 Wastes of Lean

7 Wastes of Lean Explained By Gabriel Daniels PE. Lean Six Sigma Master Black Belt

The 7 wastes are at the root of all unprofitable activity within your organization.

The 7 wastes consist of:

1. Defects
2. Overproduction
3. Transportation
4. Waiting
5. Inventory
6. Motion
7. Processing

Use the acronym 'DOTWIMP' to remember the 7 Wastes of Lean.

The worst of all the 7 wastes is overproduction because it includes, in essence, all others and was the main driving force for the Toyota JIT system, they were smart enough to tackle this one to eliminate the rest.
