

Paramonos Research & Consulting

a Lean Six Sigma Consulting Firm focus on Cost Savings & Process Improvement

Lean Management Deployment

The ultimate goal of lean management is to maximize CUSTOMER VALUE through a perfect value creation process that has zero waste.

Lean focuses to optimize the FLOW of products or services through entire value streams. In Lean deployment we focus on three fundamental business issues;

Purpose : What customer issues will be solved by Organization to achieve its own growth?

Process : How the organization assesses each major value stream to make sure each step is valuable, capable and adequate. Also how all the steps of processes are linked by flow, pull & level scheduling.

People : To make sure someone is responsible for every important process. Also how everyone actively engaged in correct operation & continuous improvement of that process.

In lean Management projects our prime focus is to develop a culture of lean in the organization. Instead of applying various lean tools directly we study the value stream & accordingly designed customized lean solutions to improve entire value stream.

During Implementation of Lean Management, we select change agents from the organizations & provide them training on identifying non-value adding activities of the value stream. In the initial phase we select pilot projects & provide handholding support to trained employees, so they can learn lean tools through practical experience.

After successful implementation in pilot projects, we expand the lean implementation scope to entire organization by involving all the employees. We teach lean thinking & techniques to each employee for 100% employee involvement. We involve suppliers & customers in lean implementation journey to improve entire value chain.

Paramonos Research Labs, a cost savings & strategy consulting firm that partner with executives on solving complicated problems within their organization using the latest costs saving data collection tools and methodologies.
